## Public Health's Operating System

### WHO ARE WE?

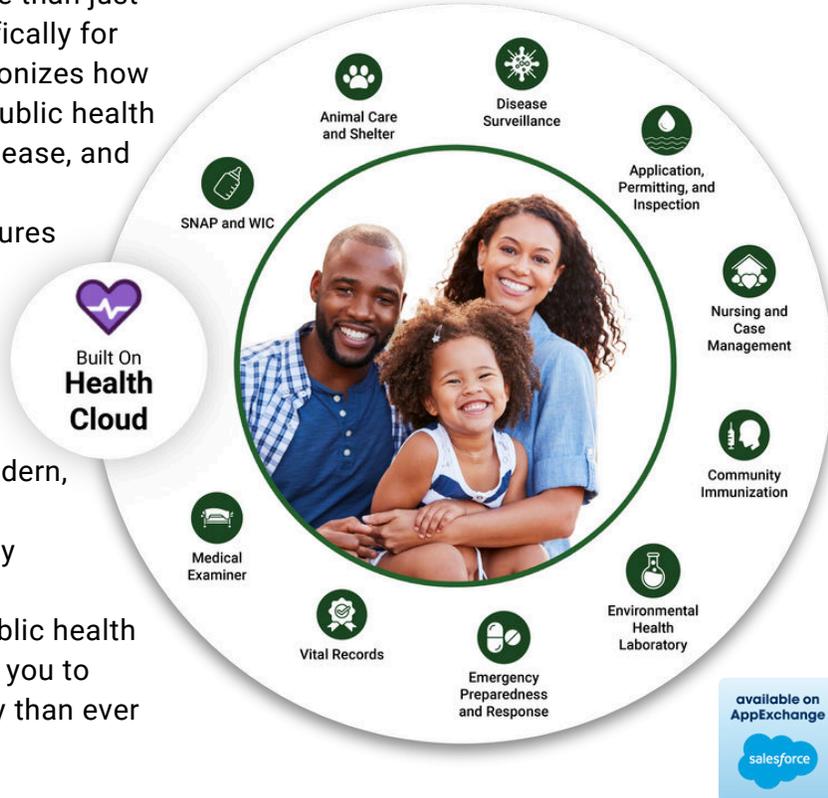

Flourish & Thrive Labs is a consulting firm focused on data modernization for state and local health departments. **For Public Health; By Public Health**

### PH360: A Modern Operating System for Modern Public Health

Built by former public health officials, PH360 is more than just software - it's a complete suite of tools designed specifically for local health departments. This unified platform revolutionizes how your department delivers services by connecting core public health functions like Environmental Health, Communicable Disease, and Health Promotion in one seamless system.

Powered by Salesforce CRM technology, PH360 features pre-configured public health workflows, AI-powered automation, and mobile capabilities that let your staff focus on what matters most - serving the community. Whether you're conducting disease investigations, managing environmental health inspections, or running community outreach programs, PH360 provides the modern, flexible foundation your department needs.

Best of all, it's future-ready. PH360 scales seamlessly during emergencies, adapts to emerging public health challenges, and grows with your department. This is public health technology that finally matches your mission - enabling you to protect and promote community health more effectively than ever before.

### The Public Health Technology Gap: Outdated Tools in a Modern World

Local health departments face unprecedented challenges in 2025. While communities expect modern, responsive service delivery, most health departments are struggling with outdated tools that weren't designed for today's public health work. Legacy systems force staff to juggle multiple databases, rely on paper processes, and spend hours on manual data entry. These disconnected systems create fundamental barriers. Here's what your department could look like with PH360:

Current State	With PH360
Programs operate in silos with no data sharing	Unified platform connects all programs and services
Staff waste hours on manual data entry	AI-powered automation handles routine tasks
Paper processes delay community response	Digital workflows enable rapid service delivery
Multiple logins create security risks	Single secure sign-on with role-based access
Limited visibility into operations	Real-time dashboards and reporting
Systems crash during emergencies	Cloud-based platform scales instantly
Staff burnout from administrative burden	More time for meaningful public health work

Your community deserves a health department equipped for today's challenges. PH360 provides the modern, integrated operating system for your LHD.

### A Complete Public Health Platform

- PH360 features modules for all core public health services including:
- **Communicable Disease:** Case Investigation & Outbreak Management, Contact Tracing, Electronic Case Reporting
  - **Environmental Health:** Restaurant & Facility Inspections, Permit & License Management, Complaint Investigations
  - **Administrative Operations:** Grants Management, Quality Improvement, Strategic Planning
